

World Environment Day

World Environment Day was used to further consolidate students' understanding of the importance of protecting the world environment, our students participated in a program to mulch the school gardens. This simple task sends a powerful message about our environment and the need to always be considerate of the impact on the environment in everything that we do. In terms of being a green school, the installation of a photovoltaic solar powered system and the installation of water tanks to reuse rain water in our toilet system, clearly demonstrates our commitment to protecting our environment.
